

WhaleHunter (\$MOBY)

Introduction

WhaleHunter (\$MOBY) is a token, community, and platform that helps members trade with the market movers of the cryptocurrency environment (Whales). Being a whale refers to holders of large wallets. Whales often are skilled traders, have some type of insider information, are gambling, or got lucky. WhaleHunter selects the proven historically successful whale wallets to trade with.

Whale trades often move cryptocurrency markets. This is especially true for smaller projects. The WhaleHunter team and its community take publicly available whale wallet addresses, analyze the wallet trading history, select those wallet addresses with a historical profitable trading history and then track that wallet's movements. When the selected wallets make trades, WhaleHunter automated bots will trade with them. Vision We drift slowly, silently, waiting to see movement in the water. Our vision is to grow a community big enough to find whales, the monsters of the crypto environment. With the alt-coin market gaining popularity at a record pace, many new sailors get lost navigating the ebb and flow of the Market Sea. Some sadly turn to random internet sites shilling promises of moons and 100x rockets; only to discover that investments often fade like shooting stars. WhaleHunter software, aided by analysis and automated trading bots, sets sail for the market influencers with our BEP-20 token ship \$MOBY.

Problem Statement

Due to the massive size of their trades whales often exponentially increase the value of a token when entering a project and significantly create downward pressure when exiting. This downward price pressure is often compounded by a massive panic-sell-off. Without a WhaleHunter alert, you risk leaving your 5x, 10x, or 20x profit on a whim. Will you open up your wallet and find your profits sunk because you weren't paying attention for a couple of hours?

Token-Use Description

Many Meme projects are popular and fade. The most successful long-term cryptocurrency projects have real-world ongoing use. The WhaleHunter platform centers around automated trading following the wallet addresses of successful market movers.

WhaleHunter gives you real-time access to what successful market movers are buying and selling. Searching through and vetting new projects isn't a sustainable strategy due to the limited graphical information, rapid increase in price after launch and the sheer volume of new coins released daily.

WhaleHunter (\$MOBY)

WhaleHunter trackers identify wallets with successful historical trading histories, follow them and make trades when those wallets make trades. Using WhaleHunter means trading with the market movers. This strategy gives you priority access to buying in at a lower price prior to the general populace.

Using WhaleHunter also means securing profits. Due to the massive size of their trades, whales often exponentially increase the value of a token when entering a project. The opposite is true when they exit a position. This downward price pressure is often compounded by a massive panic-sell-off. Automated sell features empowered by WhaleHunter mean you will be able to set a target profit percentage and sell automatically.

The WhaleHunter development team is currently working on graphical and technical analysis tools for multiple blockchains. These coin/token graphs will show the user plotted entry and exit points paired with the percentage of profit or loss. The real-time portfolio tracker being developed will also automatically display your total wallet value (including NFT's) for multiple blockchains.

Token Economics, Supply & Distribution

We designed \$MOBY to have long-term favorable tokenomics by utilizing a 6% tax on all transactions (buy, sell, and transfers). Two of the six percent is locked into the liquidity pool (LP), the second two percent is redistributed among all the current holders, and the final two percent of the tokens are burnt and buried 20,000 leagues under the sea, never to resurface.

\$MOBY has a total supply of 200 million tokens. Of those 200 million tokens, 45% will be available at launch (90 million). 40% of \$MOBY supply (90 million) was made available for a presale. Initial deployment of tokens included 10% for the development team and 5% for covering future marketing costs & server fees.

Value for \$MOBY Holders

WhaleHunter provides a free tier that includes limited wallet tracking. Meme coins are fun, but their profit and longevity aren't usually sustainable. Successful projects provide their investors with utility. WhaleHunter provides a free tier that includes limited wallet tracking. This free version has a limited number of wallets you can track, lacks access to established wallets, and is ad-supported. We want the community to benefit and as a community, we grow. Investors who take their \$MOBY tokens gain access to private tiers. These premium tiers include advanced individual wallet tracking, customizable real-time alerts, personal wallet connections (automated portfolio tracking), NFT market access, automated rug-check of new coins, automated bot trading (limit orders, trailing sell orders, whale auto buy/sell)

WhaleHunter (\$MOBY)

WhaleHunter FREE

- Free
- Live tracking of most whale trades
- Tracker is only available on ETH/BTC
- Website banner ads visible

WhaleHunter Tier 1

- Investors staking a minimum of \$250 USD gain access to Tier 1 features
- FREE tier features
- Addresses to the top 5 whales of the week
- Ads disabled
- Track and save multiple custom whale lists
- Harpoon alerts (buys/sells) are updated every 60 seconds
- Group whale lists
- Aggregate Alerts (*Basic Features only show single TXs. Level 2 would show you aggregate moves, say a whale spreads 500 BNB of purchases over 50 TXs, each for 10 BNB, over a 24- hour period. Whales are often smart enough not to dump in one move*)

WhaleHunter Tier 2

- Investors staking a minimum of \$500 gain access to Tier 2 features.
- Tier 1 features
- Plotted chart of your trading history across multiple blockchains
- Whale-of-the-week NFT lottery access
- Access to the NFT marketplace
- Harpoon alerts in real-time

\$MOBY holders are also empowered to govern the ecosystem and future directions of the projects through community votes. Providing a utility token with redistribution, locked liquidity, and verifiable burn transactions is just the beginning towards financially independent freedom.

Roadmap

Q2 2021

- Dev team assembled - completed
- Roadmap of vision - completed
- Token creation & deployment - completed

WhaleHunter (\$MOBY)

- Whale tracking program 'beta' created - completed
- Track whales on different blockchains - completed
- Compile social media team - completed
- Beta testing and launching website - completed
- 30 Day Presale - completed
- Token audit - in process
- White paper complete - completed
- Complete lock liquidity for sixteen months - in process
- List on PancakeSwap with liquidity from presale
- Community building & increase social media presence
- Listing token on awareness sites (e.g., Blockfolio/QueenDeco/CMC)
- Incorporate ads on the website for non-premium tier members

Q3 2021

- Auto Rug check new coin feature - integration in website
- Community contests
- NFTs Marketplace and giveaways
- Merch!

Q4 2021 and Beyond

- \$ MOBY-friendly downloadable app!
- WhaleHunter achievement awards
